According to independent claim 1, granulated salt is compressed to form a salt core in the turned groove of a ring carrier, the ring carrier and salt core are preheated and the two are immersed in an alfin bath.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

D1, which is considered the prior art closest to this claim, states that a suitable material, which is soluble after casting, is poured into the annular groove. D1 does not state that this is a salt core, leaving the question of pretreatment of the ring carrier open.

According to independent claim 3, a pre-compressed salt core is stuck in the turned groove of a ring carrier, the ring carrier and salt core are preheated and the two are immersed in an alfin bath.

D2, which is considered the prior art closest to this claim, states that a suitable salt core, which is soluble after casting, is secured in the annular groove in an already pretreated ring carrier. D2 does not state that the salt core is stuck in, leaving the question of the pretreatment of the ring carrier open.

Therefore the subject matter of independent claims 1 and 3 meets the requirement of PCT Article 33(3).

The use of salt cores for cavities in pistons is known from the prior art (D3). According to D6, the ring carrier is alfined together with the salt core (D6); however, that document concerns a clamping/retaining construction.

However, the cited documents do not describe or suggest preparing the salt core by *pressing* granulated salt *into* a turned groove in the ring carrier.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

Similarly, they do not describe or suggest immersing in an alfin bath the ring carrier together with the a salt core *stuck* in a turned groove. Thus the problem of avoiding the disadvantages described with respect to the D1 method (cavities between the wall and core, bonding between the ring carrier and piston) is solved.

Consequently the subject matter of independent claims 1 and 3 meets the requirements of PCT Article 33.

Claim 2 is dependent on claim 1 and hence likewise meets the requirements of PCT Article 33.
